FitCheck Setup & Deployment Guide

Project: FitCheck - Resume & Job Skill Gap Analyzer

Purpose: Resume analysis, skill-gap matching, learning modules, and CV updating

Scope: Local setup for a friend/laptop clone + optional production extras

1. Minimum requirements

- Windows 10/11 with admin rights
- Python 3.10+
- Git
- VS Code recommended
- Optional: PostgreSQL, Tesseract OCR, MinIO

2. Clone and setup

```
git clone https://github.com/UsamaZulfiqar-7/Fitcheck.git
cd Fitcheck
python -m venv .venv
.\.venv\Scripts\Activate.ps1
pip install -r requirements.txt
```

3. First run

```
streamlit run app.py
```

Open: http://localhost:8501

Default DB: SQLite file data/fitcheck.db

No Google/MinIO needed to run the app in basic mode

4. Optional: Google sign-in

- Go to Google Cloud Console > APIs & Services > Credentials
- Create OAuth 2.0 Client ID
- Authorized JavaScript origin: http://localhost:8501
- Authorized redirect URI: http://localhost:8501/
- Copy values to .env:

```
GOOGLE_CLIENT_ID=your-client-id.apps.googleusercontent.com
GOOGLE_CLIENT_SECRET=your-secret
GOOGLE_REDIRECT_URI=http://localhost:8501/
```

5. Optional: OCR for scanned PDFs/images

- Install Tesseract OCR from https://github.com/UB-Mannheim/tesseract/wiki
- Add Tesseract to PATH or set:
  TESSERACT_CMD=C:\Program Files\Tesseract-OCR\tesseract.exe

6. Optional: PostgreSQL

- Install PostgreSQL
- Create database and user
- Set DATABASE_URL in .env
- Example: postgresql://fitcheck:yourpass@localhost:5432/fitcheck

7. Optional: MinIO / object storage

- Used only for uploaded raw files and reference archive
- Not required for local demo or normal use
- Set MINIO_ENDPOINT, MINIO_ACCESS_KEY, MINIO_SECRET_KEY, MINIO_BUCKET, MINIO_REFER

8. Required env file

Copy .env.example to .env and edit only the fields you need.
Example fields to leave blank or set: DATABASE_URL, GOOGLE_CLIENT_ID, GOOGLE_CLIENT_SECRE

9. Important note

The project works offline without cloud AI; the app is fully functional with SQLite and no AI key.

10. Verify the app

- Create a profile name in the sidebar
- Upload a CV and a job description
- Run analysis
- Review skill gap, learning center, and downloads

11. If app fails to start

- Recreate venv
- pip install -r requirements.txt
- confirm .env file exists
- check database / Tesseract config

12. GitHub push

git add .
git commit -m "Complete FitCheck project"
git push origin HEAD
